

Quillmere AirPure AP300 Air Purifier User Manual

1. Specifications

- Recommended room size: up to 450 sq ft (42 square meters).
- Clean air delivery rate (CADR): 280 cubic feet per minute for smoke.
- Noise level: 24 dB in Sleep mode to 52 dB in Turbo mode.
- Power consumption: 45 W.
- Replacement filter: AP-F300 three-stage filter (pre-filter, true HEPA, activated carbon).
- Fan modes: Sleep, Auto, and Turbo, plus 3 manual speeds.
- Weight: 7.2 kg.

2. Setup and Operation

Before first use, open the back cover and remove the plastic wrap from the AP-F300 filter. The purifier will not start while the wrap is in place.

Auto mode: the built-in PM2.5 sensor adjusts the fan speed to the air quality. The air quality ring glows blue (good), amber (moderate), or red (poor).

Sleep mode: the fan runs at its lowest speed and all display lights turn off.

Child lock: press and hold the Mode button for 3 seconds to lock or unlock the controls. A lock icon appears on the display.

Wi-Fi: connect the purifier to the Quillmere Home app to set schedules and check filter life.

3. Cleaning and Maintenance

Pre-filter: vacuum the outer pre-filter every 2 weeks.

Main filter: replace the AP-F300 filter every 6 to 8 months, or sooner in homes with pets or smokers. Do not wash the HEPA layer; water damages it.

Reset the filter indicator: after installing a new filter, press and hold the Filter button for 5 seconds until the indicator turns off.

Air quality sensor: clean the sensor lens on the side panel every 2 months with a dry cotton swab.

4. Troubleshooting and Error Codes

- E04: Fan motor fault. Unplug the purifier for 10 minutes, then restart it. If E04 returns, contact support.
- E11: Air quality sensor blocked or dirty. Clean the sensor lens with a dry cotton swab.
- E17: Filter life ended. Replace the AP-F300 filter and reset the filter indicator.
- E21: Filter not installed correctly. Reseat the filter and close the back cover firmly.
- Blinking red ring: the filter will reach end of life within 2 weeks. Order a replacement filter.
- Steady red ring: air quality is poor. This is normal and not an error.
